
Billy Martínez

Backend / Platform Engineer | Kotlin, Spring, TypeScript | SAP BTP

Temuco, Chile | Remote contractor | Full US-hours overlap | hello@billyflin.dev | billyflin.dev | linkedin.com/in/billyflin | github.com/Billyflin

Backend and platform engineer with 2+ years of professional product delivery and hands-on ownership from domain modeling to production troubleshooting. I build secure multi-tenant systems, integrations, auditable workflows, and cloud delivery across Kotlin/Spring, TypeScript, PostgreSQL, SAP BTP, and Google Cloud.

EXPERIENCE

BeCloud Consulting | SAP Consultant

Jan 2025 - Present

- Design domain models and service logic with SAP CAP/CDS, integrate Fiori and Work Zone experiences, and work across HANA, Joule, and BTP environments.
- Own implementation, integration, deployment, and environment troubleshooting across distributed enterprise solutions.
- Introduced automated testing and a QA stage; coordinate validation with QA and design before delivery.
- Evaluated cost and technical fit for a confidential platform and drove an in-progress AWS-to-Google-Cloud re-platform decision.

Happ Rent | Full-Stack Developer

Oct 2023 - Sep 2024

- Delivered product work across frontend and backend in a rental-technology environment.

SELECTED TECHNICAL WORK

Clinipets | System architecture and backend

- Designed a modular Kotlin/Spring platform with clinic-scoped tenancy, passwordless access, roles, global pet identity, and conflict-safe scheduling.
- Built versioned clinical records with signatures and auditable addenda, signed idempotent payment webhooks, secure attachment quarantine, and reliable outbox-based notifications.
- Defined OpenAPI contracts and Docker-based delivery for web, mobile, PostgreSQL, and private object storage components.

SAP CAP + Fiori Reference | github.com/Billyflin/sap-cap-fiori-btp

- Published CDS/OData V4 and Fiori Elements delivery with XSUAA/HANA design, two architecture decisions, and 11 CAP service tests covering role authorization and resilient external OData behavior; lint, production build, and CI pass.

TECHNICAL CAPABILITIES

Kotlin; Spring Boot; SAP CAP/CDS; Node.js; TypeScript; REST/OpenAPI; PostgreSQL; multi-tenant architecture; authentication and authorization; payments and webhooks; Docker; CI/CD; Google Cloud; AWS; observability.

EDUCATION, CREDENTIALS AND LANGUAGES

Ingeniería Informática, Universidad de La Frontera | 2020 - 2026 | Final semester, three courses remaining; coursework completion expected in 2026.
AWS Cloud Solutions Architect; AWS Cloud Technology Consultant; AWS Academy Machine Learning Foundations; Google Advanced Data Analytics.
